PROJECT REPORT --- DIGITAL LITERACY

Name: **Ayush Shukla**
Reg No: **25BAI10168**
Branch: **CSE (AI/ML)**
Year: **1st Year**
Course Code: **CSE0001 – Digital Literacy**
Date: ***27/03/2026***

Introduction

Digital literacy is an essential skill in today's technology-driven world. It involves the ability to use digital tools effectively, communicate responsibly online, and maintain a professional digital presence. As a Student Digital Ambassador, this project aimed to develop and demonstrate key digital skills through practical tasks.

The project included creating an infographic, building a professional online portfolio, exploring coding and collaboration platforms, understanding email etiquette, and studying

cybercrime awareness. Each task contributed to improving my understanding of digital tools and responsible online behavior.

Overall, this project helped me gain hands-on experience and prepared me to use digital technologies effectively in my academic and professional journey

Task 1 – Infographic Write-up

For this task, I used Canva to create a digital literacy infographic. Canva was chosen because it is user-friendly and provides a variety of templates for designing visually appealing content.

My infographic covers key aspects of digital literacy such as understanding digital tools, safe internet practices, and maintaining a professional online presence. I included examples of tools like Google Docs, GitHub, and LinkedIn to make it relevant for students.

While designing the infographic, I found it interesting to present information visually instead

of using plain text. It helped me understand how design enhances communication. However, selecting the right layout and balancing text with visuals was slightly challenging.

This task improved my creativity and helped me understand the importance of spreading awareness about digital literacy in an engaging way.

Task 2 – Digital Portfolio Write-up

For this task, I created and updated my profiles on GitHub and LinkedIn. These platforms are essential for building a professional digital presence.

GitHub is used to showcase coding projects and collaborate with other developers. I created a profile README to introduce myself, including my academic background and interests in AI and machine learning.

LinkedIn is a professional networking platform where students can connect with industry professionals, explore job opportunities, and

build their career profiles. I updated my education details and began developing my profile.

In the coming years, I plan to regularly upload projects on GitHub and actively engage on LinkedIn by connecting with professionals and sharing my learning journey.

This task helped me understand importance of maintaining a strong the online presence for future career growth.

Task 3 – Platforms Write-up

For this task, I explored both a coding platform and a collaboration tool. I used HackerRank to practice coding and completed a beginner-level problem called "Solve Me First." This helped me understand the basics of programming and problem-solving.

For collaboration, I created a Digital Literacy Awareness Quiz using Google Forms. The form included five questions with both multiple-choice and short-answer formats.

Creating the form helped me understand how information can be collected and analyzed using digital tools like Google Sheets. These tools are useful for academic activities such as surveys, quizzes, and teamwork.

Overall, this task gave me practical exposure to coding platforms and online collaboration tools, which will be helpful in my academic journey and future projects.

Task 4 – Write-up

Poor digital communication can lead to misunderstandings and negative impressions. For example, if a student sends an email to a professor without a proper subject line or uses informal language, it may be ignored or considered unprofessional.

Such issues arise due to a lack of awareness about proper email etiquette. A clear subject line, polite tone, and structured content are essential for effective communication.

This task helped me understand the importance of professionalism in digital communication.

Writing clear and respectful emails can create a positive impression and improve communication outcomes.

Task 5 – Write-up

While researching cybercrime, I was surprised to learn how easily people become victims of UPI fraud due to a lack of awareness. Many users do not realize that entering a UPI PIN results in money being deducted, not received.

This task highlighted the importance of being cautious while using online payment systems. Even small mistakes can lead to financial loss.

As a result, I will be more careful while using digital payment apps and will never share sensitive information. I will also spread awareness among my peers to help them stay safe online.

Conclusion

This project provided valuable insights into digital literacy and its importance in everyday life. It helped me develop essential skills such as creating digital content, building an online

presence, using collaboration tools, and understanding cyber safety.

Through this project, I learned how to communicate professionally and use digital platforms responsibly. These skills will be beneficial for my academic growth and future career.

Overall, the project enhanced my confidence in using digital technologies effectively and responsibly.
